**NORTHISLE ANNOUNCES SECOND HOLE AT RED DOG INTERSECTS
0.33% COPPER AND 0.52 GPT GOLD OVER 146 METRES**

Vancouver, B.C. – Northisle Copper and Gold Inc. (“Northisle” or the “Company”) is pleased to report results for the second drill hole (RD 16-02) from the recently completed four-hole diamond drill program on the Red Dog deposit. When taken in conjunction with the initial hole of the program, RD-16-01, the results increase the potential for the Red Dog resource to be included in the Preliminary Economic Assessment (PEA) that is currently underway for the Hushamu deposit.

Highlights

- **Hole RD 16-02 intersected 0.33% copper and 0.52 gpt gold over a core length of 146 metres.**

Jack McClintock, P. Eng, President of Northisle commented: “We eagerly await the results for the remaining two holes from this season’s verification drill program. Being able to include Red Dog as a qualified resource in the Hushamu PEA has the potential to significantly benefit the overall scope and economics of the project.”

Drill Results

Hole	From (m)	To (m)	Width (m)	Copper (%)	Gold (gpt)
RD-16-02	8	154	146	0.33	0.52
*RD-16-01	1.5	200	198.5	0.31	0.47

Reported widths are drilled widths. True widths have not been determined.

**Previously reported on September 13th, 2016.*

Drill-hole RD 16-02, drilled at -71 degrees to the south was collared four metres from and parallel to historical drill hole EC 132A/132 that was drilled by Utah Mines Ltd. in 1982. The historical hole assayed 0.31% copper and 0.51gpt over a similar interval length of 146 metres, statistically identical to results in RD-16-02. There were no geological differences noted between the two holes.

Red Dog is located eight kilometres northwest of the Hushamu Deposit within Northisle’s 100% owned North Island Project on Vancouver Island, British Columbia. Results for the remaining two verification holes will be released as they become available.

Analytical Techniques

Analysis of core samples was carried out at BVL Minerals’ (formerly ACME Analytical) Vancouver facility. Gold analysis is by fire assay methods with atomic absorption finish. Analysis for copper and other metals is by a four acid digestion with ICP finish. Quality Assurance and Control (QA/QC) included insertion of standards and blanks in to the sample stream and duplicate samples on quartered core.

The North Island Copper-Gold Project

The Hushamu Resource

The North Island Copper-Gold Project is situated approximately 15-40 kilometres southwest of Port Hardy and contains the Hushamu Deposit and five other partially explored copper-gold porphyry occurrences. The Company has a current resource estimate of the Hushamu Deposit which has been filed on Sedar. The project is 100% owned by Northisle.

	Tonnes (x1000)	Resource Grade				Contained Metal				
		Copper %	Gold g/t	Mo %	Re ppm	Cu Eq %	Copper B lb	Gold M oz	Mo M lb	Re Kg 1000
Indicated	304,000	0.21	0.29	.010	0.55	0.45	1.4	2.8	65.7	167.4
Inferred	205,600	0.18	0.26	.008	0.38	0.39	0.8	1.7	34.9	78.1

** Copper equivalent calculated using US\$2.50/lb Cu, US\$1100/oz Au and US\$14.00/lb Mo and is not adjusted for mining and metallurgical recoveries as these remain uncertain. The formula used is as follows: $CuEQ = (Cu\% \times 22.0462 \times 2.50) + (Au \text{ g/t} \times 1100.00 / 31.1035) + (Mo\% \times 22.0462 \times 14.00)$. Rhenium values have not been used in the cutoff grade or Cu Equivalent calculations

Red Dog Property

The Red Dog Property is located 8km northwest of the Hushamu Deposit and hosts a historical mineral resource of 20 million tonnes grading 0.30% copper, 0.5gpt gold and 0.012% molybdenum. The reader is cautioned that a qualified person has not done sufficient work to classify the historical estimate as current resources and Northisle is not treating the historical estimate as current mineral resources.

John McClintock, P. Eng is the Qualified Person responsible for the technical content of this release.
